

CHILDREN CARE MANAGEMENT SYSTEM

Be on the forefront of **customer servicing** through the use of **latest technology** and the **latest organisation techniques**.

The Child Care Management System was created with Child Care Centers in mind. Regulation is becoming more and more demanding on child care centre owners and administrators. Paper work requirements have increased as have the requirements for monitoring and control, to ensure the child care center is constantly meeting regulation and operating parameters and still making a profit.

And it's not just about managing administrative tasks! The child care management system is all about helping the child care center to provide a professional service to its customers. It's all about managing the day to day tasks efficiently to leave more time for the children and parents.

Parent's expectations have risen over the years. One cannot just provide a bare minimum customer service anymore. Parents expect a professional service from centres that take care of their children. Child Care Centres have to equip themselves with the right technology that helps them manage their services professionally.

Our Child Care management system ensures our clients are on the forefront of customer servicing through the use of latest technology and the latest organisation techniques.

Rapid Deployment

The system is installed over the internet on any number of computers or laptops.

Scalable

The system is scalable to meet the demands of any permit management team. Logins can be added or removed as required.

Customisability

The system is upgradeable and customisable to cater for all particular requirements and more.

Tried and tested

The system uses a tried and tested software platform and so ensures usability, effectiveness and efficiency.

Functionality

The Child Care Management System automates the communication between child care center and the parents through system generated email notifications, eliminating mistakes and freeing up time.

Dashboard

Overview of all permits in a quick and easy to understand dashboard that helps prioritise and track progress. GIS & Mapping. Manage permits through map based technology that gives you perspective. Issue a permit with confidence knowing that you're looking at the whole picture.

Dashboard

Overview of all the information required to run a child care centre in a quick and easy to understand dashboard that helps prioritise actions and track progress.

Payments & Receipts

Automate the administrative side of the child care centre with printable invoices, receipts, statements and reports. Be professional!

Enrollment System

Comprehensive details of each child at your fingertips: Basic details, parent information, medical records, eating requirements, emergency instructions, timesheet, advance booking, administration of medication requirements, and much more... Be in control!

Carer System

Manage your team of carers flexibly, efficiently and effectively through the Carers System.

Child Development System

This ensure you not only organise the child development effort with your team of carers but also manage each and very child's development needs, progress and achievement and last but not least report such progress to the child's parents.

Support for Documents

Full support for Documents related to children, carers and the centre. Lower dependence on paper! Please check out our document control system for more information.

Technology & Services

The Child Care Management System is based on the Lornit.BI Platform. The business intelligence platform provides small and medium businesses with the high level technology that is normally associated with large enterprises. This technology allows us to deliver the Child Care management System in an affordable, cloud based solution to Child Care Centers.

Technical support

The permit management system comes with remote support and maintenance.

Customisation

The permit management system is customised to the exact requirement of each and every client.

Updates & upgrades

The permit management system picks up our updates and upgrades dynamically to ensure you're always up to date.

Cloud computing

The permit management system is cloud based which means zero capital investment on the system and peace of mind that data is not lost should the computers or laptops get lost.

System Requirements

- Windows based PC or laptop with internet connectivity.
- Windows XP, Windows Vista, Windows 7 updated with the latest updates from Microsoft.

Service Features and Benefits

At Lornit we pride ourselves in tailoring our solutions to our clients. Even though the core functionality is available right out of the box, we still customise the Child Care Management System to fit exactly with the requirements of our clients; be it a logo, a disclaimer or a new set of tools that will help you do that additional task.

High level functionality

- Dashboard
- Reporting
- Child Enrolment
- Carer Management
- Package Configuration & Settings
- Invoicing and Receipts
- Child Development Monitoring
- Document Management
- Check-in
- Check-out tools

Support and Maintenance

- We offer **real time support** for our systems. Our clients are assigned a customer support agent who will manage their specific requirements and ensure each and every query or request is being handled efficiently.
- We also deliver **upgrades and updates continuously**. We analyse every suggestion and recommendation of our clients. We come up with solutions, develop updates to the system and test those updates vigorously. Updates that pass testing can be picked up automatically by our software. Our update process is seamless and hassle free.
